14th August, 1974.

Minister for the Media

Dear Senator McClelland,

Registration of Intention to apply
for a Public Broadcasting Licence.

The Community Radio Federation (Melbourne) wishes to register its intention to apply for a public broadcasting licence for a transmission area encompassing the Melbourne community (Melbourne Metropolitan Regional Area).

It is understood that such an application would be in keeping with the policies of the Australian Government which encourage community involvement in the radio media and encourage the establishment of community radio stations to meet specific social and cultural needs in the community.

These policies have been expressed through the Federal Cabinet's acceptance, in principle, of the recommendations of the P.M. Inquiry (McLean Report) and the Minister's statement opening the Media Department's Conference of 3rd & 4th July, '74.

Background:

The Community Radio Federation, (C.R.F.), is a federation of community groups concerned with the establishment and operation of an independent, non-profit radio station to enable groups and persons representing a wide range of community interests and concerns to have regular communication with the Melbourne metropolitan region. Further details are given in the paper presented by the C.R.F. at the Media Department's recent Public Broadcasting Conference - copy attached to this letter.

Type of Licence sought:

The licence should allow transmission of a general interest program (including music), on a power of 500-1,000 watts, with a frequency allocation in the A.M. broadcast band, preferably near the top end of the band (1,400 -1,600 kHz). This would provide adequate coverage of the Melbourne metropolitan region and would not impose prohibitive antenna, site and equipment costs. Licencing under the Wireless and Telegraphy Act is preferred to licencing under the Broadcast and T.V. Act, since the latter would impose unnecessarily rigid technical and program strictures on community radio groups.
